Shell Script 로 elasticsearch 운영 자동화하기

YongKyun Kang godway1225@gmail.com

About Me

- I am interested in dealing with big data
- Programmer based on Security, ESM(SIEM) Server at AhnLab, Inc.
- Blog : https://godway1225.wordpress.com

Elasticsearch 운영을 위한 작업들

Elasticsearch 운영을 위한 작업들

- Daily Job
 - 내일의 인덱스 생성하기
 - 오래된 인덱스 삭제하기
 - 어제의 인덱스 forcemerge 하기
 - Cluster 간 인덱스 백업하기
- Occasional Job
 - Unassigned 된 샤드 처리하기
 - Close 된 인덱스 순차적으로 open 하기
 - Primary shard 균등하게 rebalance 하기

내일의 인덱스 생성하기

내일의 인덱스 생성하기

생성할 인덱스명: filebeat-6.8.13-2021.02.28

INDEX_DATE=`date -d tomorrow "+%Y.%m.%d"`

MacOS: INDEX_DATE=`date -v+1d "+%Y.%m.%d"`

ELASTIC_ADDR=127.0.0.1:9200

INDEX PREFIX=filebeat-6.8.13-

curl -XPUT "http://\$ELASTIC ADDR/\$INDEX PREFIX\$INDEX DATE"

(ex) curl -XPUT "http://127.0.0.1:9200/filebeat-6.8.13-2021.02.28"

crontab 등록

0 22 * * * /usr/local/elasticsearch/util/create_index.sh

Create index API

Creates a new index.

PUT /my-index-000001

오래된 인덱스 삭제하기

오래된 인덱스 삭제하기

100일전 인덱스 삭제하기

INDEX_DATE=`date +%Y.%m.%d --date '100 day ago'`

MacOS: INDEX_DATE=`date -v-100d "+%Y.%m.%d"`

Delete index API

Deletes an existing index.

DELETE /my-index-000001

curl -XDELETE "http://\$ELASTIC_ADDR/\$INDEX_PREFIX\$INDEX_DATE"

(ex) curl -XDELETE "http://127.0.0.1:9200/filebeat-6.8.13-2020.11.10

crontab 등록

0 23 * * * /usr/local/elasticsearch/util/delete_index.sh

어제의 인덱스 forcemerge 하기

어제의 인덱스 forcemerge 하기

INDEX_DATE=`date -d yesterday "+%Y.%m.%d"`

MacOS: INDEX_DATE=`date -v-1d "+%Y.%m.%d"`

NUM_SEGMENT=10

Force merge API

Forces a merge on the shards of one or more indices. For data streams, the API forces a merge on the shards of the stream's backing indices.

curl -XPOST

POST /my-index-000001/_forcemerge

"http://\$ELASTIC_ADDR/\$INDEX_PREFIX\$INDEX_DATE/_forcemerge?max_num_segments=\$NUM_SE GMENT"

(ex) curl -XPOST "http://127.0.0.1:9200/filebeat-6.8.13-2021.02.17/_forcemerge?max_num_segments=10

crontab 등록

30 0 * * * /usr/local/elasticsearch/util/forcemerge_index.sh

- 인자로 받은 월의 인덱스에서 close 된 인덱스를 날짜 역순으로 구한다

- Warm Cluster 에 백업할 인덱스가 이미 존재하는지 확인
- Hot Cluster 에 백업할 인덱스가 존재하는지 확인
- Repository 에 백업할 인덱스와 동일한 명으로 백업할 인덱스를 포함하는 snapshot 생성
 - o snapshot 생성 결과 확인: IN PROGRESS, SUCCESS, PARTIAL, FAILED
 - 결과가 PARTIAL 인 경우 생성했던 snapshot 삭제하고 백업 종료
 - 결과가 FAILED 인 경우 백업 종료
- snapshot 생성에 성공하였으면 Warm Cluster 에 Restore 시작
 - o Warm Cluster 에 Restore 가 완료되었는지 확인
 - 진행중이면 대기
- Warm Cluster 에 Restore 가 성공적으로 이루어졌으면
 - 생성했던 snapshot 삭제
 - Hot Cluster 에서 백업된 인덱스 삭제(옵션)

- Unassigned 된 샤드가 존재하는지 확인한다.
 - unassigned 된 shard 가 존재하고 나머지 모든 shard 가 정상적으로 구동중인지 확인한다. (인덱스가 recovery 중이거나 하는 경우에는 처리하지 않기 위한 확인)
- 노드당 균등하게 가질 수 있는 shard 개수를 구한다
- shard 개수를 부족하게 가지고 있는 노드를 찾는다
 - 해당 노드가 가지고 있는 shard 리스트를 구한다.
 - 구한 shard 리스트에 존재하지 않는 shard 를 임의로 하나 선정한다.
 - 위에서 찾은 임의의 shard 의 replica 를 소유한 노드를 찾는다.
 - 위에서 찾은 replica shard 를 shard 개수가 부족한 노드로 reroute 시킨다

Primary shard 균등하게 rebalance 하기

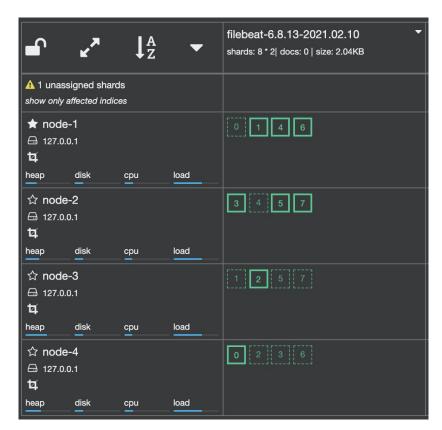

Primary shard 균등하게 rebalance 하기

```
cluster/reroute
  "commands": [
       "cancel": {
         "allow_primary": true,
         "index": "filebeat-6.8.13-2021.02.10",
         "node": "node-1",
         "shard": 0
```

Primary shard 균등하게 rebalance 하기

- Node 에 primary shard 개수가 replica shard 개수보다 많은가?
 - Primary shard 의 replica shard 를 가진 node 의 primary shard 개수가 replica shard 개수보다 적은가?
- Node 에 primary shard 개수가 replica shard 개수보다 적은가?
 - Replica shard 의 primary shard 를 가진 node 의 primary shard 개수가 replica shard 개수보다 많은가?
